FEATURED PROJECTS

AGENTSWARM — AUTONOMOUS SYSTEM & AUDIT HARNESS

- Orchestrated autonomous multi-agent systems across 4 harnesses (agy, omp, pi, step), executing 34 runs and producing 520 artifacts and 33 publications across 9 domains.
- Implemented immutable controls with 35/35 hash chains intact, enforcing 0 oracle violations across 1,254 tool calls and 0 overclaiming of 2 self-assessing agents.
- Enforced independent audit validation and regression testing: 22/25 claims verified exact and 195/224 passing agent-written tests independently re-run.

JOBAGENTS — DETERMINISTIC ORCHESTRATION & DATA PIPELINE

- Built deterministic data orchestration engine with zero external dependencies (Python stdlib only), processing 7,613 jobs / 5,854 distinct roles across 10 sources and 334 companies tracked.
- Designed rule-based matching and data reconciliation pipelines computing 22,839 match scores (0 model calls), merging 1,759 duplicate postings, and isolating 155 matches above score threshold 65.
- Maintained production audit controls with 0 failures on review invariants, enforcing an anti-fabrication guard catching 8/8 seeded fabrications across 47 recorded runs (2,662 remote roles).

AI ECO — FASTMCP & SWARM ARCHITECTURE

- Architected agentic automation workflows integrating 10 swarm agents, 15+ tools, and 5 resources using FastMCP (MCP).
- Enforced operational boundaries and memory constraints with living memory bound <4,000 words, attaining an 83.4% fitness score.
